

# Ancestris

**Our ancestors have  
so many stories to tell...**

# *Ancestris,* *unlimited genealogy*

Designed by volunteers passionate about genealogy, Ancestris is an open source genealogy software respecting the Gedcom standard and totally free.

Finding ones ancestors and bringing them back to life, diving back into their time and understanding our History is a work of collective memory that Ancestris teams have committed to make accessible to all, without restraint.

Since its creation in 1998, Ancestris, manages every month more than 4 million ancestors, 1 million family stories, a past going up 55 generations and one of the oldest ancestors dating back to Merovech. These are so many unlimited treasures in which everyone will be able to dive again and again with passion and emotion!

## **Manage your genealogy in complete freedom!**

Free of cost and free of access, Ancestris lets you keep your genealogy under control. Your data is stored in a Gedcom file and no genealogical data is hidden in a file unreadable by other software. Ancestris works on Windows, MacOS and Linux.

Ancestris helps you in your genealogy research and can manage several genealogies at the same time. Tree sharing allows you to automatically find common ancestors with other Ancestris users and to share information with them.

*“Ancestris has all the great features of genealogy software and more!”*

*Didier, passionate genealogist*

## **A powerful software**

Ancestris brings powerful features in addition to traditional tools from other software. With the Internet publication integrated into your site in a very user-friendly navigation, your genealogy can be spotted by cousins who will then be able to help you in your research.

Classical and more sophisticated editors, dynamic tree view, geographical view, chronological view, list of places, sources and media, varied genealogy statistics: Ancestris offers more than 30 tools to manipulate your genealogy or to do analyzes. You can even get a graphical rendering of your tree to print it later on paper.

Ancestris is used across 70 countries and supports 15 languages.

*“Ancestris is the ideal tool to start your genealogy or to migrate from another software.”*

*Alice, historian*

## ***A community at your service***

Ancestris takes into account your suggestions on a day-to-day basis. Feel free to suggest new features or improvements directly via the software. Genealogists or programmers will reply to you through the mailing list, the Forum, Skype, or Twitter.

If you wish to, you can join the Ancestris team of developers, translators, or you can simply share your experience in the online help.

*“Strict compliance with the Gedcom standard allows you to exchange genealogical data without error.”*

*Guillaume de Morant,  
journalist in French Genealogy Review (RFG).*
